

APPLICATION TRANSFER REQUEST FOR S.N. 09/855404 & PCT/US02/14773

Section I. TRANSFER REQUEST BY (PRINT NAME) Mike Wityshyn

Date 09/18/02

TO: Art Unit 1723

Class/sub 204 or 210

FROM: A.U. 1651

Class 435

REASON: This application is drawn to a method of using a membrane filtration apparatus made by a specific method. The membrane is specifically designed with an electro-active material that facilitates removing charged objects. It is asserted that use of radio frequencies can facilitate removal of charged organic molecules (claim 5). The reference to bacteria and viruses at page 1 of the specification is in the context of prior art, not the instant invention. There is no application of wave energies to cells or enzymes where the purpose of the wave energy is to act on the cells or enzymes themselves which would be proper for 435/173.1+. According to the classification schedule, "Class 204 - Chemistry: Electrical and Wave Energy, for the separation or purification of a liquid solely by the application of an electrical force directly to the liquid or when combined with a separation step classifiable in Class 210, subclass 767-808. Exemplary electro-osmosis with or without filtration or electrophoresis with or without gravitational setting." Thus it would seem that class 204 or class 210 is proper for this application.
